VERDAZO

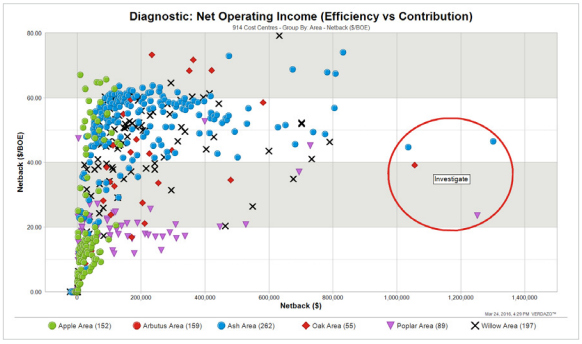
Target efficiencies. Optimize performance. Add millions to the bottom line.

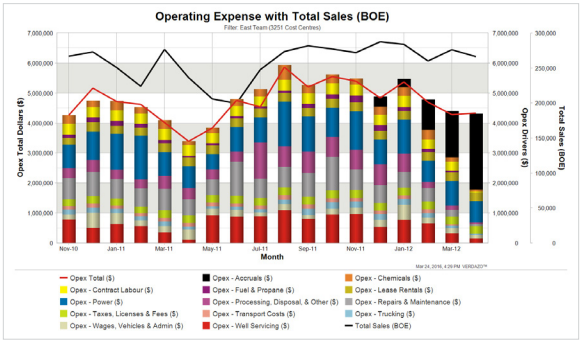
Analyze your financial data

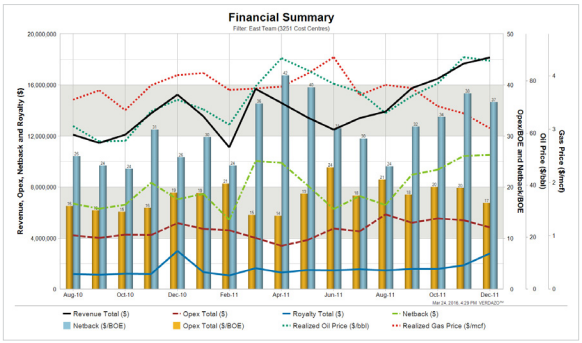
Optimize financial performance by identifying operating cost issues and revenue opportunities

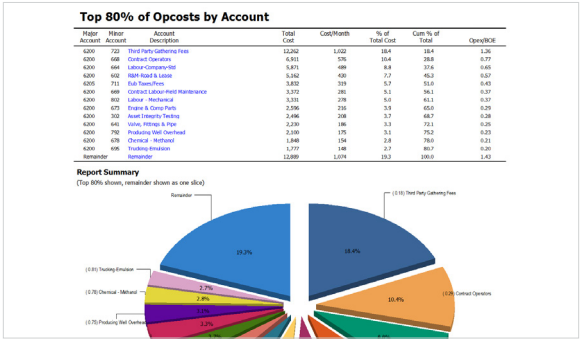
VERDAZO enables you to answer the following questions with proven workflows:

- Which wells are generating the most revenue and which need attention?
- What is the breakdown of my operating costs, and are they changing over time?
- What wells are losing money and should be shut-in?
- What wells have had workovers that aren't paying out?
- What wells are sold, or not producing, that are still incurring operating costs?
- What wells have not had all their revenue booked?
- Have there been any dramatic changes in shrinkage or liquid yields that could be impacting my bottom line?
- How do processing fees, power fees and trucking fees compare across all wells in a selected region?









Verdazo Analytics enables Oil & Gas companies to target efficiencies, optimize performance and add millions to the bottom line. VERDAZO software is purpose-built for Oil & Gas and offers unmatched capabilities for all stages of the well lifecycle. Verdazo Analytics also offers Machine Learning predictive analytics services. Learn why so many companies trust Verdazo Analytics to help them take their businesses to the next level at www.verdazo.com.
